Number System:

Rational number : Non terminating repeating (10/3)
Irrational Number : Non terminating, non repeating (22/7)
Real Number : (Rational + Irrational) - All numbers are Real Numbers.
Integers : integers are whole numbers (not fractions) that can be positive, negative or zero.
Whole Number : whole numbers are natural numbers including 0.
Natural Number : natural numbers starts from 1……

Number= $a^p \times b^q \times c^r$
Total Factors= (p+1) (q+1) (r+1)

Where a, b, c are distinct prime numbers and p, q, r are natural numbers.

Q1.) N= 9000 = $2^3*3^2*5^3$

Total factors =(3+1)*(2+1)*(3+1) = 4*3*4= 48
Odd factors =(2+1)*(3+1)= 3*4=12 **{ 3 & 5 are odd numbers }**
Even factors = Total factors – odd factors = 48-12=36
Prime factors= 3 **{2,3 and 5}**
Composite factor= **totalFactors – primeFactors – 1**
Not prime Not Composite: 1

✓ **Sum of all factors:** Number= $a^p \times b^q$

$$\text{Sum}= \frac{(a^{p+1}-1)}{(a-1)} \times \frac{(b^{p+1}-1)}{(b-1)}$$

✓ **Product of all factors:** Numbers$^{(\text{total factors}/2)}$

FACTORIAL

$$\frac{(X!)}{(P)^n} = \text{(P is Prime Number)}$$

Q1.) What is the Highest Power of 7 in 100!
Ans.) 16

Q2.) what is the highest power of 15 in 100!
Ans) 100! / 15 = 100! / ($\mathbf{3^{48} \times 5^{24}}$) = 100!($3^{24} \times 5^{24}$) x 3^{24} = 100!/ (15^{24}) x 3^{24} =**24**

(IF NUMBER IS NOT DIVIDED BY PRIME NUMBER, BREAK IT IN THE FORM OF PRIME NUMBERS

NOTE: $2^{97} * 3^{48} * 5^{24} * 7^{16} * 11^{9} * 13^{7} * 17^{5}$

Q1.) $(732)^{635}$ = $(732)^{635/4}$ = REMAINDER 3.

{ divide the last two digits of the power by 4 i.e. 35/4}

When unit place is 2, and remainder is 3, check in table, answer is 8.

CALENDER

1.) Multiple of 4 is Leap Year (4,8, 12, 16,….)
2.) Century Year is Non Leap year (100,200,300).
3.) 4th century year is Leap Year (400, 800, 1200, 1600….)
4.) 100 years= 5 odd days
    200 years = 10/7 =3 odd days
    300 years = 15/7 = 1 odd day
    400 years= 20/7 = 6 + 1 more extra day= 0 odd day
5.) 1st odd day is Monday.

Jan	Feb	March	April	May	June	July	Augu	Sept	Oct	Nov	dec
0	3	3	6	1	4	6	2	5	0	3	5

NOTE: If leap year add 1 in every column from feb month…otherwise take same days for months. For ex, for 22 october 1997, take no of days from table = 0, now calculate odd days for 22 days= 1, so total odd days till in 22 october is 0+1=1;
